

Return to Work Day

20 January 2026, Online

The day is aimed at haematology SpRs and middle grade doctors returning to clinical practice in the UK after a break from clinical practice (e.g. PhD, maternity leave). The day covers a review of changes in practice across all areas of haematology and rebuilds confidence in the ability to manage common and important clinical scenarios, with a focus on emergency management. The day will also be suitable for HSSTs and consultants in their first few years after CCT and those working abroad but will focus on UK practice.
